Skills

Software engineer with experience develop SAAS products, hybrid mobile applications, frontend and backend.

- I used languages like php, typescript, dart and Nodejs.
- In a moment I coded with Java and Kotlin for a native Android app, but I'm not used anymore.
- +6 years using Laravel, from version 4.2.
- I used other frameworks and tools like as Express, NestJS and SpringFramework.
- Experience with Linux servers, cloud providers like AWS and Digital Ocean.
- Principal experiences with Relational DBs and short experiences with NoSql like Mongo or Redis, I used that's, but without be an expert.
- Frontend skills using Angular (in a Nativescript application), VueJS, Nuxtjs, Tailwind and SCSS.
- I made hybrid mobile applications with Nativescript and Flutter.
- Docker experience for development flow.
- I'm not an expert, but can use Sketch app for design projects.
- Thinks I like to learn this year: Ruby

Professional Experience

Rateinc/Checkrocket

Software Engineer (May 2015 - Present)

Engineer behind checkrocket.com, a SAAS platform to take checklists with a mobile application. Responsible for:

- Administrate the infrastructure in AWS to run the application using AWS EB, S3, RDS with Postgresql and ElastiCache.
- Develop backend tasks with Laravel, from basics controllers to Exports that run over queues with Redis and Horizon.
- Develop frontend with jquery, Angularjs 1.5, but currently this components are rebuilding and migrating to VueJS.

- Develop mobile application with Nativescript.
- Develop custom packages for the product, like “plugins” that extends the functionality with composer packages in separated modules.

...

Octano

Personal Projects

MotorexChile (2015)

<https://motorexchile.cl>

I built a custom e-commerce over Laravel to make B2B and B2C purchases for this company.

Tomaton (Present)

<https://tomaton.party>

An application to drink with friends simulating a board game, the principal difference with the apps in the market is that Tomaton required to every player use his phone to improve the experience with Realtime game like voting. Written in flutter, using Cloud Firestore as Realtime Database and designed from scratch in sketch, it's a personal project.

Pide Club (Present)

<https://pide.club>

A small ecommerce for persons that need control his orders and products, the focus of the product are Instagram profiles that sell products or services via DM and don't purchase a Shopify because is a expensive platform for them commercial requirements.

I made other freelances jobs building a store in Shopify or configuring a WooComerce store for other companies.

No tech things

I have a mini family with my couple, my little princess (my daughter), 2 bunnies and 2 cockatiels. I like the coffee made it with a V60 Dripper and good beans. Something play cards with friends like Magic or Mitos y Leyendas, a Chilean game cards. Currently with my couple play Overcooked 2 a lot of time, more than I would like to admit.
